from django.urls import path

Abdelrahman, an hour ago • Electronic Store - Django Project

from .views import *

urlpatterns = [

path('products/', pro_index, name='product-list'),

path('products/add', addProduct, name='add-product'),

path('products/insert', insertProduct, name='insert-product'),

path('products/edit/<int:pk>', editProduct, name='edit-product'),

path('products/del/<int:pk>', delProduct, name='delete-product'),

path('products/bulkdel', bulkDelProduct, name='bulk-delete-pro'),

path('categories/', cat_index, name="category-list"),

path('categories/add', addCategory, name='add-category'),

path('categories/insert', insertCategory, name='insert-category'),

path('categories/edit/<int:pk>', editCategory, name='edit-category'),

path('categories/del/<int:pk>', delCategory, name='delete-category'),

path('categories/bulkdel', bulkDelCategory, name='bulk-delete-cat'),

Path cannot deal with class, it deals with as_views instead which inherit from the class

]
